Is it or isn’t it marine debris?

Animals can easily mistake plastic for familiar food items. Plastic doesn’t just look like food, it smells, feels and even sounds like food. Draw a line from the real food item in the first column to the look-alike plastic item in the second column. Then draw a line to the animal in the third column that is likely to ingest the plastic item as food.

1.) plankton, microplastics, sardines
2.) sand eels, silver ribbon, puffin
3.) squid, plastic bottle, harbor seal
4.) jellyfish, plastic bag, sea turtle

Answers: 1.) plankton, microplastics, sardines 2.) sand eels, silver ribbon, puffin 3.) squid, plastic bottle, harbor seal
